

ACCESSORY AND LABELLING

MC CHIPBOARD SLAB

code**TS1765**

Laminated (melamine coated) chipboard worktops are wood based worktops that are preferred at the manufacture of modular furniture of any type. These are manufactured by pressing decoration papers impregnated with melaminous resins produced with special recipes at high pressure forces. These are antistatic, scratch, impact, abrasion resistant, colour-fast, easy to clean and aesthetic looking products.

CHIPBOARD SLAB

code**TK1770**

code**TK1760**

code**TK2260**

PVC COATING

code**PVC1770** code**PVC1760** code**PVC2260** code**PVC1257**

PVC is a long lasting, against weather conditions resistant and durable plastic alloy that is produced with the appropriate and necessary additives. Actually, this plastic alloy material is very hard to burn due to the high chlorine content in PVC. Therefore, a separate against fire protecting material is provided due to this feature of PVCs. Beside this, PVC materials are preferred due to being easy to clean and having a long lifetime.

GALVANIZE COATING

code**GZT1770** code**GZT1760** code**GZT2260** code**GZT1257**

Galvanized sheets are produced by the zinc coating of both surfaces of cold rolled sheets by the hot dip method in order to protect the steel against corrosion. Galvanize coating preserves steel against rain, sea water and the humidity in the air and extends the lifetime of the material. Along with having a long lifetime, galvanized materials are easy to sold, can very easily dyed and are resistant against fire and any type of external factors.

MDF SLAB

code**MDF1770** code**MDF1760** code**MDF2260** code**MDF1257**

MDF worktops are plates with a homogeneous structure created by pressing the fibres obtained from wood or other cellulosic raw materials under heat and pressure after having these dried until a definite humidity level and glued. MDF is preferred due to its homogeneous density at every point due to its structure, is able to be obtained in standard dimensions, its perfect behaviour at milling works, that it holds the screws applied to the surface and the edges well.

STAINLESS COATING

code**INOX1770** code**INOX1760** code**INOX1257**

Stainless steel covered benches are resistant against corrosion, abrasion and wear. This feature is naturally given by the smooth surface of the stainless steel. The hard and smooth surface of Inox both facilitates the cleaning and constitutes a ground, that prevents the adhesion and reproduction of the bacteria in the air. Due to these features are Inox products used in many areas from durable consumer goods to surgical materials, from automotive to electronic devices.

ESD COATING

code**ESD1770**

Antistatic ESD coating is an easy to clean material with a smooth surface and high mechanical resistance. ESD coated benches have anti-dust features, are stainless and water tight. ESD, in other terms antistatic epoxy coating, is preferred in working environments, where electronic production is performed or where electrical energy decreases the efficiency and deteriorates the manufactured product. ESD bench coatings are delivered with grounding cables. They have a heat resistant, odour-free structure.

MASSIVE COATING

code**MSF1770** code**MSF1760**

Solid wood worktops are plates obtained by the adhesion of single piece or edge to edge attached pieces of small dimensioned massive wood pieces, meaning lamellas, of the same wood type, particularly such that the fibres are in parallel, in the length and width direction into a single layer. Solid wood worktops are materials with a long lifetime that have a high dimensional stability and resistance along with both being healthy and decorative due to the naturalness of wood.

BRAKE AND SAFETY

Mobility and ergonomics are important at our products, but it is necessary to fix the product position for some processes. For this, you can use the brake apparatus at the wheels.

The locking and releasing process is easily provided when you push on the brake latch with a single foot movement.

SAFETY LATCH

Since safety is very important at products with drawers, the security latch prevents the autonomous opening of the drawers even if the lock system should be opened. Thus, you can easily use your cabinets with drawers on inclined and bad surfaces.

We have applied our latches on the right side for usage easiness purposes. We have taken into consideration to ensure the safety with a single movement.

LABELLING

You can customize the drawer handle labels with a couple of steps by the software we developed. You can indicate the materials inside the drawers with the ready-to-use symbols or write the material names you wish to. Thus, you can avoid material losses and save time by finding the materials you need faster.

Enter our Internet site and click on the Label Configurator option, create and print on the opened page your labels. Now drawers are ready to speak the same language with you.

PUSHING HANDLE

These facilitate the handling of mobile units. We convert vertical products usable by attaching pushing handles to them.

HAULING HANDLE

We apply our products in a broad range such to be used with 2 hands by handling grips.

SLIDING PUSHING HANDLE

We apply embedded handles to the covers at our doors with sliders in order to avoid a restriction of the movement capability.

PULLING HANDLE

These facilitate the handling of mobile units. We convert horizontal products usable by attaching pushing handles to them.

10 M EXTENSION CABLE

code**UK10**

4 x socket 220 V extension cable. You can provide flexibility in the working environment with this stable and long lifetime model, having a plastic body resistant against impacts and falling. The risks due to unnecessary cables on the floor will be prevented thanks to the non-interfering, flowing spool system. It is equipped with a handle and vertical usage allowing feet for easy retraction. The cable spools have a circuit breaker system against overheating.

ELECTRICAL PANEL

code**EP15**

code**EP12**

These are used reliably at the electricity, data, image and voice transmission with their sockets at different standards. They provide more plug connections and usage easiness in narrow spaces thanks to the 45° inclined poles. The fact that the lateral hatches can be mounted reverse or straight provides layout easiness for 19" cabinets.

AIR JACK

code**HJK4**

4x Air Jack

The 4 x output air jacks for using the air installation at the production areas at the benches are your greatest aid in order to use your different pneumatic hand tools easily and in an ergonomic way.

LIGHTING SET

code**FTX-120**

Lighting Set 1200mm

code**FTX-170**

Lighting Set 1700mm

Fluorescent lamps are very widespread used in public areas and workplaces due to their energy saving advantage. Fluorescent lamps, which provide a saving of nearly 75 percent compared with normal lamps, consume less energy and provide more light and have a lifetime of more than the 10-fold of normal lamps. The light is more spread since it comes from every point of the tube and not only a single point and their blueish light is softer and doesn't fatigue the eyes.

LINBIN AND FILE SHELVES

codeAVR17

LinBin Rack 1700mm

codeAVR980

LinBin Rack 980mm

codeAVR500

LinBin Rack 500mm

codeAVS980

LinBin Rack 980mm (A150)

The linbin shelves and the file shelves are manufactured of durable steel sheet material, which can be easily assembled to your workbenches. In the linbin shelves can small production materials be tidily and always available stored in linbins to be used in different sizes and colours. With the file cabinet shelves for the storage of documents, able to be added into the same environment or as a top shelf solely, space saving is provided for the storage of documents without requiring a separate space.

FILE CABINET w/ SLIDER

codeSDD850

File Cabinet w/ Slider 850mm

Our cabinets with sliding covers provide space saving and serve your purpose thanks to their sliders for the storage of materials, folders, documents etc. you want to be in closed environment at your working table.

MONITOR DAMPER

KEYBOARD ELEVATING TRAY

VICE

codeKM125

Vice 125mm

codeKM150

Vice 150mm

Vices are tools, that are used to grip and hold the piece to be processed. The vice grips the piece with a mouth and prevents that this makes unwanted movements. The vices, offered in the accessory range, are manufactured of high quality forged steel. While a complete tempering is being performed, the jaws and the anvil sections are separately tempered by induction.

code**KTT100**

125'lik Kauçuk Teker Takımı

100'lik Kauçuk Teker Takımı

Rubber Wheels

Rubber wheels protect all hard ground surfaces like parquet, linoleum, vinyl, tiles and mosaic. They provide extra protection for sensitive cargoes thanks to their feature to absorb vibrations and shocks. These pass easily over hindrances like elevator doors, cables.

code**PU100**

code**PU125**

100'er Coated Polyurethane Polyamide Wheel Set

125'er Polyurethane Coated Polyamide Wheel Set

Polyurethane Wheels

Polyurethane coated wheels, forklifts, any type of industrial wheels can be used in automotive, iron-steel, textile, logistics, storage areas and plants. Among the advantages of the polyurethane wheels can high elasticity, perfect wear resistance, high load bearing capacity be mentioned. Beside this, they are resistant against oils, solvents, water, ozone, bacteria and moulds.
